

## DATAVS2 PROFESSIONAL: GET MORE FLEXIBILITY

Datalogic Automation is glad to announce the introduction of the NEW DataVS2 Professional (PRO), the new model of DataVS2 series that merges inspection functionalities with identification capabilities in a single device.

The huge range of available inspection tools makes DataVS2 PRO the most flexible vision sensor on the market.

Thanks to 6 different locators and 12 different controls the device allows to solve even the most challenging applications in a simple and intuitive way.

DataVS2 PRO combines together all the functionalities already available on AOR and ID models. The vision sensor also includes three new tools based on edge inspection: 360° contour match locator for an accurate and reliable object location, 360° defect finder for detecting even the smallest defects on a part and 360° contour counter for multiple item presence verification.

The combination of Auto-ID and inspection capabilities together with new contour-based matching tools broaden the applicative scenarios dramatically thus making DataVS2 PRO the one-for-all solution for every quality control.

Product highlights:

- - Ease-of-use
- - Graphical User Interface
- - Compact dimensions (70x52x40mm)
- - Powerful integrated illuminator
- - Greyscale VGA resolution (64x480 pixels)
- - Adjustable focusing
- - 4 different focal lengths (6mm, 8mm, 12mm, 16mm)
- - Embedded Ethernet and RS232 interfaces
- - 20 memory slots
- - Compatibility with VSM (Vision Sensor Monitor)
