

THE NEW AREX: ULTIMATE FIBER LASER MARKING SYSTEM IN UNMATCHED COMPACTNESS

Datalogic Automation Laser Marking is pleased to introduce AREX, the ultra compact Fiber Laser that is setting a new reference standard in the permanent marking arena .

With the smallest marking head footprint, AREX drastically simplifies design for system integrators, and make very ease mechanical installations in all the applications from stand alone marking station to fully automatized working centre inside a production line.

Thanks to state-of- the-art fiber technology, AREX allows high speed marking on metal and plastic material increasing systems productivity typically for Automotive and Electronics industry applications.

AREX implements advanced embedded digital platform equipped with 4 independent axes controls offering PLUG&PLAY solution for static and dynamic marking conditions.
