

## DATALOGIC REVOLUTIONIZES DIMENSIONING SOLUTIONS FOR TRANSPORTATION & LOGISTICS MARKETS WITH DM3610 DIMENSIONER

Datalogic announces the release of the next generation DM3610 Dimensioner.

The [DM3610](#) is a compact, overhead dimensioning unit that automatically measures the length, width, and height of packages as they are transported on a conveyor. The self-contained dimensioner is designed for simple installation and provides an elegant solution for a range of applications across multiple markets including parcel, warehousing & distribution and airports.

“The launch of the [DM3610](#) is the result of over 15 years experience providing dimensioning solutions. With the [DM3610](#), Datalogic is now uniquely positioned to provide a comprehensive solution portfolio for facility managers addressing their Auto-ID, dimensioning, sensing, and marking needs” said Darrell Owen, Vice President Marketing, Identification Business Unit.

The [DM3610](#) is certified in Legal-For-Trade applications and its highly accurate measurements make it the perfect product for spatial management applications. When integrated with barcode scanners and scales, the [DM3610](#) improves operations for systems such as AS/RS, trailer cubing, automated shipping & manifesting and revenue recovery.
