DATALOGIC LAUNCHES THE NEW PDA MEMOR - DATALOGIC

Bologna, September 29th 2020. Datalogic is pleased to announce the availability of the new Memor™ K mobile computer, a powerful, pocketable companion for any data capture application in retail store, manufacturing floor, or distribution center. The Memor K stands out on the market for its unique features, combining high performances with very small dimensions and excellent ergonomics.

Workers can increase their productivity carrying out their tasks by running smoothly simultaneous applications. The speed, security, stability and use of Android™ 9 OS is guaranteed by the superior computing power of the Memor K. It features an extremely powerful octa-core CPU running at 2.2 GHz, and 3 GB of memory.

Users easily and instantly read 1D and 2D codes in any orientation, and on any surface, including mobile screens, as the Memor K comes with a very fast and robust imaging technology.

Personnel can use the device all day long without any stress or fatigue: the Memor K is in fact very light weight and has a great ergonomics. Thanks to its small size, it can be kept in the pocket and easily taken out whenever needed.

This new device is designed to handle plenty of applications and to last several shift schedules for uninterrupted work activities. If users would run out of power, they can simply take a new charged 3,800 mAh Li-on battery from the docking station, and quickly swap it out for another 12 hours of seamless work. This operation is made in seconds with the Memor K's easy-to-replace battery design.

The Memor K amazingly simplifies the capture of any data for every scanned item in many ways. It is ergonomically designed, with a large 4-inch touchscreen display and a backlit soft rubber keypad. This provides a comfortable tactile feedback and ensures fast and correct typing, even in the darkest conditions. The device also comes with two comfortable side scan buttons to allow the scanning of items using only the thumb. In addition, to accelerate and ease repetitive actions, any desired function can be assigned to two other programmable side buttons.

The Memor K combines its ultra-thin design with a highly rugged assembly. It can sustain repeated drops up to 1.2 m / 4 ft onto concrete, and its IP54 rating guarantees high protection from dust and water.

Users have access to fast download and upload connections through powerful Wi-Fi communications (includes the AC standard), while the USB-C assures rapid data transfer and high charging speeds.
