

DATALOGIC SMART PORTAL: THE INTELLIGENT GATEWAY TO SELF-SERVICE

Bologna, July 21, 2026 – Datalogic, a global leader in automatic data capture and industrial automation, today announced Datalogic Smart Portal, a self-service hub connecting people, devices, and digital services to make interactions faster, more autonomous, and easier to manage.

More than a kiosk or mounted tablet, Smart Portal combines enterprise-grade scanning, NFC technology, and seamless connectivity in one compact, wall-ready platform. Its unique +25° tilted scan engine, purpose-built for wall-mounted use, places every scan at the ideal angle, allowing users to access information, services, and self-service workflows naturally, without adjusting their posture or the device height.

Retail: Connected Self-Shopping Experiences

Smart Portal turns self-shopping into a connected journey. Shoppers can identify themselves using loyalty cards, activate self-shopping devices, access promotions, verify prices, check availability, and complete checkout tasks such as NFC payments or age verification more quickly and independently.

Hospitality: Faster Guest Services

Smart Portal supports quick and convenient guest check-in and digital concierge services, helping reduce queues while allowing staff to focus on more personalized and higher-value guest interactions.

Healthcare: Improving Patient and Staff Workflows

Smart Portal streamlines self-check-in, appointment management, information access, and facility navigation, reducing administrative workload while improving service continuity. Its hygienic, easy-to-clean design makes it suited for environments where cleanliness and uptime are critical.

Easy to Deploy. Ready to Scale.

Smart Portal helps organizations retail, hospitality, and healthcare install, power, and maintain self-service points quickly and consistently, reducing deployment effort and operational complexity through VESA standard mounting, PoE or standard power, and remote management capabilities. To support long-term performance, security, and lifecycle continuity as self-service needs evolve, Smart Portal is powered by the Qualcomm Dragonwing™ platform and upgradeable through Android™ 19.

Expanding the Datalogic Portfolio

“Smart Portal represents the next step in self-service innovation,” said Rosario Casillo, Executive Vice President, Product & Solutions of Data Capture Division at Datalogic. “By connecting people, devices, and digital services in one platform, it helps customers create experiences that are more autonomous, efficient, and user-friendly.”

Smart Portal expands Datalogic's mobility portfolio, connecting customers, associates, devices, and services in one simpler, seamless self-service journey.
