

Datalogic Group Environmental, Health & Safety Policy

Datalogic considers environmental protection one of the biggest and most important challenges in the world today, hence the management is willing to find solutions to develop the business in an ecological and sustainable way.

For us that means a healthy environment, both at territory and community levels where our company has a presence. Datalogic's aim is to bring a positive benefit to the societies in which it operates through high quality services, economic growth, community involvement and employment.

We are committed daily to:

- comply with the applicable legislation and other requirements that the organization has decided to conform to, to reduce the impact on the environment;
- perform periodically updated programs regarding health and safety in the workplace, pursuing the goal of “zero on-the-job injury” and “zero occupational illness”;
- adopt ecofriendly technologies that minimize air pollution and waste water, diminish energy consumption and noise, increase the recycling and reusing of waste and reduce as far as possible the raw material consumption per product;
- involve employees and suppliers to keep the interest and awareness high in terms of health, safety and environmental issues;
- build and maintain a good and collaborative relationship with the local population.

October 2019

Valentina Volta

Group Chief Executive Officer
